

For applications requiring a Pendant Handle instead of the standard Pull Chain Controls for the up/down motion control on a Hoist and/or the forward/reverse motion on a Trolley, use the following chart to select the appropriate Pendant Handle Assembly or combination of Pendant Handle and Hose Assembly for a specific hoist series.

Please note that the standard length for Pendant controls is 6 ft. in most cases. When a part number contains a set of parentheses, (), the specific length of hose can be specified in feet.
